

Real Asset intelligence

"To consistently share world-class asset management best practice in unison with contemporary challenges within the global utility community. Data-driven decision making can only lead to value when the data can be trusted."

- OHROS RAI Expert

Real Asset Intelligence (RAI)© – is a wholistic framework, facilitated by OHROS Consulting group, aligning **Data Security, Quality, Accessibility, and Lifecycle Management** to develop a '**Single Source of Truth**' to facilitate trustworthy and actionable asset data. **RAI©** is implemented through a modular approach, allowing us to provide personalized value to individual scenarios. The first three modules allow customers to gain real-time full insight into all their IT assets and mutual relations, facilitating the development of your '**Single Source of Truth**'.

Challenges

Inconsistent Data Quality

Governance Issues

Management Complexities

Operational Planning Challenges

Risk in Capital Investments

Data Silos

Reactive Strategies Adoption

Service Approach

Data Analysis:

- Analyse data systems and benchmark.
- Data categorization assessment.
- IT due diligence assessment.
- Data check including Quality, Security, Accessibility, Validity, etc.
- Benchmark "as is" to industry best practices.

Design:

- Develop a gap-report outlining the current maturity of the wholistic IT environment, including the data dimensions.
- Develop clear RAI © implementation roadmap.

Implementation:

- Implementation of RAI© roadmap.
- OHROS Consulting Group's subject matter experts' execution support
- Splunk subscription * (when applicable)

Key Challenges RAI® overcomes

Data-Driven Decision Making

- › **50%** acknowledge that decision-making is data-driven
- › Approach to decision-making is still predominantly reactive

Monetization and Competitive Advantage

- › Only **43%** claim to be able to monetize their data
- › Less than **40%** can realize a competitive advantage

Financial Benefits of Data Mastery

- › Organizations with data mastery experience substantial financial benefits
 - **70%** higher revenue per employee
 - **245%** higher fixed asset turnover
 - **22%** higher profitability

Centralized, reliable data source

Ensures data accuracy and enhances decision-making
