

Company

A key player in the transition to sustainable transportation, the company's e-mobility unit develops and provides electric vehicle charging solutions across Europe.

“To prevent inefficiencies and a lack of alignment across departments”

As our client is rapidly increasing the number of charging stations, the need for robust asset management has become increasingly important to ensure that the set goals and targets are met. This responsibility lies with a specific department within the organization, which has already implemented several management systems across various functions. To avoid inefficiencies and ensure corporate alignment, the objective was to harmonize all these management systems (ISO27k, ISO45k, ISO55k).

Approach

1. Mapping & Alignment

- Mapping out the processes, objectives and standards of the existing systems alongside ISO 55000.
- Identifying overlaps and gaps to ensure all systems support each other rather than conflict.

2. Integration

- Developing a framework to integrate the management systems under common goals, terminology and performance indicators.

3. Standardization

- Harmonizing policies, procedures, and reporting mechanisms.

Objectives

Avoiding inefficiencies

Harmonizing ISO management systems allows the organization to eliminate redundancies and overlap in processes that often arise when multiple management systems are implemented independently. Without harmonization, different departments might conduct similar tasks separately, such as audits or documentation, leading to duplicated efforts, wasted resources, and potential inconsistencies.

Alignment across departments

A harmonized ISO management system supports alignment and coherence across various departments within the organization. When systems are integrated, departments can work towards shared goals with a common understanding of policies and procedures. This alignment promotes better communication, collaboration, and a unified organizational culture, ensuring that all departments are moving in the same direction.

Streamlining processes

Harmonizing ISO management systems enables the integration of different processes into a cohesive framework that supports the organization's objectives. Instead of managing separate systems with potentially conflicting or overlapping requirements, the organization can develop streamlined processes that meet the criteria of multiple ISO standards simultaneously. This integration not only simplifies management but also enhances the organization's ability to monitor, measure, and improve its performance across all relevant areas.

Results

The harmonization of the different management systems forms the foundation for alignment across different departments within the company. The benefits of this alignment will become evident over time and will include:

- Communication and collaboration across departments
- Improved compliance
- Consistency in decision-making
